\$1 MILLION
HOLE-IN-ONE CHALLENGE*

**Held in conjunction with Perfect Golf Event*

Together, keeping our community in rhythm

St. Anthony's is committed to providing high quality care to the people of this region. Our long-standing partnership with nationally-recognized Prairie Heart Institute of Illinois means you don't have to look any further for advanced heart care. We are privileged to have three local, full-time cardiologists, Dr. Amir Cheema, Dr. Subhashish Agarwal, and Dr. Jessica Prange, plus over 30 other Prairie Cardiovascular physicians that serve patients in this region. Prairie Heart Institute at St. Anthony's combines advanced technology and innovative treatment with a caring tradition, to provide quality health care close to home.

We are proud to offer these advanced cardiac services at Prairie Heart Institute at St. Anthony's:

Cardiac Catheterization: A catheter is thread through an artery to the heart and a special dye is injected to see the arteries on the screen to determine the presence and extent of vessel damage in those patients who have symptoms of cardiac disease.

Heart Monitors. These implantable heart monitors lay under the skin and automatically record any abnormal heart rhythms for an accurate diagnosis and to determine treatment options.

Pacemakers. This small electronic device sends out electrical impulses to make the heart beat in a regular rhythm and at a normal speed.

Peripheral Angiogram. This test shows the supply of blood to the arteries in your legs and can help determine if interventional measures should be taken to open the blocked arteries.

Angioplasty, Atherectomy, and Stent placement. These procedures serve to unblock the artery, remove plaque from the artery, and keep the artery open.

Along with our advanced procedures, we also offer:

- Electrocardiograms
- Holter monitoring
- Event monitoring
- Echocardiograms
- Transesophageal echocardiograms

- Stress echocardiograms
- Cardiac stress tests
- Vascular ultrasound studies
- Sleep studies

With your continued support of our cardiac services, proceeds from this event will assist in the purchase of equipment that elevates our heart care to new levels.

Imager Dicom Desktop Printer

This is more than just a photo printer, it provides the patient and family with an educational image package of before and after photos of their procedure. The images produced give clinicians and patients a detailed look into the arteries and "see" the effects of the life-saving procedure. The doctors can use the photos to answer questions and further explain the procedure and the results. This package becomes the property of the patient after the procedure and can be used for further review or future comparisons.

SCIFIT PRO2 Total Body Exerciser

Following a cardiac event or procedure, many patients require some form of cardiac rehabilitation to increase cardiac muscle strength and maintain heart health. The SCIFIT PRO2 is an upper body exerciser and lower body recumbent bicycle exerciser that provides the muscle resistance to effectively strengthen the muscle groups so that cardiac health can be restored and the patient can quickly return to their normal lifestyle.

SonoSite S II Ultrasound System

This state-of-the-art ultrasound machine has a small footprint and is portable. It allows the doctor to clearly visualize nerves and vessels with increased clarity and color sensitivity to elevate diagnostic confidence.
